D5 Deliverable: Group Reflection Write-Up

1.) anything positive you enjoyed or learned from this assignment

Our understanding of the process behind creating decision trees increased. Also, we became more comfortable with calculating entropy and information gain.

2.) anything negative you didn't like about this assignment

None.

3.) any parts of this assignment you found easy

The easiest part of this project was creating a function to calculate information gain.

4.) any parts of this assignment you found challenging or couldn't get working correctly

The biggest challenge of this project was to find a library to help us create an output file for task 1. Eventually, we found a library called graphviz.

5.) how your team functioned, including details such as what each team member contributed, how the team communicated with each other, and how team software development & design was accomplished

What each team member did:

Vihan: wrote source code for task 1

Billal, Adeena, Yuriy: completed tasks 2 - 4, wrote reflection, and worked on readme file

Communication:

Communication was done using Google Meet.

Team Software development:

Team software development and design was accomplished by making a shared folder in google drive and placing source code there.

6.) any other remarks you want to make

None.
